olan.ekm@gmail.com | 095 465 0939 | [Linkedin: Olan Ekmanochai](#)

Skills

Programming & Scripting	Python, SQL
Machine Learning / AI	Classical ML, Deep Learning, Signal Processing, Computer Vision
Large Language Models (LLMs)	RAG, PagedAttention , Prompt Engineering
Core Libraries & Frameworks	NumPy, Polars, Scikit-learn, Matplotlib, OpenCV, YOLO
Operating Systems & DevOps	Linux (shell scripting, package management)
HPC & Cloud Platforms	LANTA Supercomputer , SIAMAI Cloud , Google Colab
Productivity & Collaboration	Git, Kaggle, Notion, Visual Studio Code
Languages	Thai (native), English — TOEIC 930/990 (2026) & CEFR C1

Experiences & Achievements

SuperAI Engineer Season 5 — AIAT 2025
Silver Medalist

- Ranked among top participants nationwide in Thailand's largest AI engineering competition, spanning multiple hackathons in NLP, computer vision, and data science.

Ethical Finance Hackathon — SCBX, SCB10X x SuperAI SS5 23 June 2025 - 27 June 2025
Winner | Python · LLMs · Data Science

- Developed a multi-agent financial analysis system ensuring BOT/SEC compliance.
- Used MoE-based LLM with self-feedback for accurate, ethical answer validation.
- Designed tabular agent to extract stock trends for Rise/Fall prediction.
- Experimented with various LLMs on [LANTA](#), selecting [Qwen3-30B-A3B](#) (0.84 accuracy) for best performance.
- Applied [PagedAttention](#) to improve inference speed for long-context inputs.

Audio Understanding Hackathon — SCBX x SuperAI SS5 26 May 2025 - 30 May 2025
1st Runner Up Award | Python · NLP · Signal Processing

- Verified required statements in Relationship-Manager call recordings (e.g. greeting, self-introduction).
- Applied noise-based grouping and filtering by signal-to-noise ratio to improve processing efficiency and apply appropriate filtering strategies.
- Experimented with ASR models, including fine-tuning [Whisper-th-medium](#) on [PORJAI-CENTRAL](#) using [LANTA](#) to improve transcription accuracy.
- Tagged required statements with a compact zero-shot LLM to ensure accurate, real-time detection across varied audio.

Liver Fibrosis Severity Prediction Hackathon — AIAT & SuperAI SS5 02 June 2025 - 06 June 2025
Python · Image Processing

- Predicted liver fibrosis severity (transient-elastography score) from shear-wave elastography and B-mode ultrasound images.
- Segmented liver parenchyma with U-Net + ResNet-34 and view-specific preprocessing (blur, median, CLAHE).
- Explored [medsam-vit-base](#) for interactive liver segmentation by defining view-specific boundaries, achieving usable segmentation quality to support feature extraction.
- Extract texture and morphology features from the segmented masks and trained regression models to estimate TE values.

Teaching Assistant – Data Science & AI Feb 2024 - Apr 2024
ITCAMP 20, King Mongkut's Institute of Technology Ladkrabang

- Assisted in mentoring students in the Data Science & AI track, introducing core concepts in machine learning and data analysis through hands-on guidance.
- Provided one-on-one support to students, answering questions and clarifying technical topics to strengthen understanding.

Education

King Mongkut's Institute of Technology Ladkrabang 2023 – Present
B.Sc. Information Technology, Major in Data Science and Business Analytics - GPA 3.95 / 4.00
